PA & AUDIO SYSTEMS

We offer a range of custom designed PA systems suitable for churches. We work with you to ensure you have the correct equipment for what you require as we are aware each house of worship has different requirements from one another.

Within a church it is imperative that your congregation is able to clearly hear your message regardless of the ceremony.

CHURCH PROJECTION

Projection systems serve a variety of purposes in a church setting. They can display live video of events happening at the front for those seated further back, as well as show hymn lyrics, prayers, congregational responses, or even, for presenting slideshows, images, or videos during services and special events.

We understand that multiple people may need to operate the AV equipment, so ease of use is essential. That's why we recommend a simplified control system as easy as a **single On/Off button**—designed for maximum impact and minimal complexity.

LED SCREENS

LED screens offer a powerful and engaging way to share your message with the congregation. Ideal for sanctuaries, worship halls, and outdoor services, our LED systems ensure exceptional visibility, brightness, and clarity—even in direct sunlight. Whether you're displaying song lyrics, live video, or announcements, each installation is custom-designed to suit your church's unique space and needs.

Church Projection and Audio System upgrade!

A complete solution for your Church!

✓ SUMMARY

Our client approached 3 Monkeys AV wishing to upgrade their projection and audio system. Immaculate Heart's existing projection system lacked brightness and clarity and did not cater for modern display formats. The audio system was suffering from audio feedback issues and a general lack of speech intelligibility. The system was also difficult to operate with multiple steps required to conduct simple day to day ceremonies.

✓ CLIENTS GOALS

- Upgrade of the projection to achieve larger, brighter, display able to cater to current video formats.
- Upgrade to an audio system that provided clear intelligible speech and music reproduction.
- An AV system that was easy to control with very little user training required to operate.

✓ CHALLENGES

As with many houses of worship, the Immaculate Heart Church presented some acoustical challenges, with high ceilings and reflective surfaces resulting in a highly reverberant environment prone to microphone feedback. The projection system design had to perform at high level while having as little adverse effect to the Churches exceptional aesthetic features.

✓ SOLUTIONS

3 Monkeys AV installed an easy-to-use touch screen controller customised specifically for our client, with only buttons and controls relevant to their specific AV System. Use of the system was further simplified by programming customised buttons that include several commands under the one button.

The installed audio system includes the use of the Active Audio Ray-on Speakers. The Ray-on speakers are imported exclusively by 3 Monkeys AV in Australia, and were chosen for their low profile and exceptional directivity. The Ray-On speakers were able to direct sound onto the seated areas of the Church, providing a more direct sound to the listeners ear, reducing reflective sounds providing clear intelligible speech and music reproduction.

Projection system – 2 x high brightness laser projectors along with 2 x 140" Motorised Projection screens were installed, along with a Video over IP distribution system to connect the client's content from either the back or front of the Church as required.
